

Requirements Table

Student Club Event Ticketing & Budget Portal

Student: Syed Junaid Ahmed

Sec: 5C-AIML

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall route event budget proposals through a multi-stage approval workflow (Faculty Coordinator -> Finance Office -> Dean).	High	Pass: Status transitions sequentially upon digital sign-off. Fail: Request reaches Dean without Finance Office sign-off.	Ensures financial oversight and accountability before funds are committed.
FR-002	Functional	The system shall allow a Club Lead to submit an event proposal containing event details, date/venue, and an itemized budget request.	High	Pass: A submitted proposal appears in the Faculty Coordinator's queue with all required fields populated. Fail: Proposal with a missing required field is accepted.	Captures the information approvers need to make a funding decision.
FR-003	Functional	The system shall generate a unique, single-use QR-code ticket for each attendee once they register for an approved event.	High	Pass: Each generated ticket has a unique code not shared with any other ticket. Fail: Two attendees receive tickets with the same code.	Prevents ticket duplication and supports secure venue entry.
FR-004	Functional	The system shall allow Campus Admin to scan an attendee's QR-code ticket at the venue entrance and mark it as "used" upon successful validation.	High	Pass: A valid, unused ticket is accepted and immediately flagged as used. Fail: A ticket already marked used is accepted a second time.	Enables accurate, real-time entry control at events.
FR-005	Functional	The system shall notify the Club Lead by email whenever the status of their budget proposal changes (submitted, approved, rejected).	Medium	Pass: An email is sent within 2 minutes of any status change. Fail: Club Lead receives no notification after a status change.	Keeps club leads informed without requiring manual status checks.
NFR-001	Nonfunctional (Performance & Security)	The QR-code ticket scanner API shall validate entry authenticity in under 100 ms at venue check-in points.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Avoids bottlenecks and long queues at event entrances.
NFR-002	Nonfunctional (Security)	The system shall restrict access to the budget approval workflow to authenticated users with the appropriate role (Faculty Coordinator, Finance Office, Dean), and shall automatically end an idle session after 15 minutes.	High	Pass: A user without the required role receives an "access denied" response when attempting to approve a budget; an idle session is logged out after 15 minutes. Fail: An unauthorized role can approve a budget, or an idle session remains active beyond 15 minutes.	Protects sensitive financial approval data and reduces risk from unattended sessions.
