

Use-Case Flow Specification

Problem Statement #10 — Student Club Event Ticketing & Budget Portal

Name: Syed Junaid Ahmed
Sec: AIML-5C

Use Case: UC-02 — Request Budget Approval

Primary Actor: Club Lead

Supporting Actors: Faculty Coordinator, Finance Officer, Dean

Preconditions:

- An event proposal (UC-01) has already been submitted and saved in the system with status "Draft."
- The Club Lead is authenticated and is the owner of the proposal.
- The proposal contains a complete itemized budget request.

Postconditions:

- Success: the proposal status is set to "Approved" and the approved budget amount is recorded against the event.
- Failure: the proposal status is set to "Rejected" and the reason for rejection is recorded.

Main Success Scenario:

1. The Club Lead selects a submitted proposal and clicks "Request Budget Approval."
2. The system routes the proposal to the Faculty Coordinator's approval queue and sets status to "Pending – Faculty Review."
3. The Faculty Coordinator reviews the proposal and digitally signs off.
4. The system automatically forwards the proposal to the Finance Office and sets status to "Pending – Finance Review" (includes UC-03: Route Approval Workflow).
5. The Finance Officer reviews the budget line items and digitally signs off.
6. The system forwards the proposal to the Dean and sets status to "Pending – Dean Review."
7. The Dean reviews and digitally signs off, approving the final budget.
8. The system sets the proposal status to "Approved," records the approved amount, and notifies the Club Lead by e-mail (FR-005).
9. Use case ends successfully.

Alternate Flow — 6a. Rejected at Any Approval Stage:

- a. At step 3, 5, or 7, the reviewing approver (Faculty Coordinator, Finance Officer, or Dean) rejects the proposal instead of signing off, and enters a rejection reason.
- b. The system immediately halts the approval routing and sets the proposal status to "Rejected."
- c. The system notifies the Club Lead by e-mail with the rejection reason (FR-005).
- d. The Club Lead may revise the proposal and resubmit it, restarting the use case from step 1.
- e. Use case ends in failure.
